

Trend Micro™

NeatSuite™ Standard

All-In-One, Integrated Protection for Medium Business

Today your business is threatened by a new generation of blended threats that attack at multiple entry points to find the weak point in your defenses. The latest of these are “Web threats,” which target specific businesses or communities to steal private data for profit on the black market.

Trend Micro offers you NeatSuite™ Standard, a fully integrated, centrally managed enterprise security suite designed to protect your Internet gateway, mail servers, files servers and desktops from Web threats and other malware. NeatSuite Standard scales to meet the needs of mid-sized businesses with limited IT resources by providing an integrated, all-in one security solution that is easy to manage and deploy.

Unlike competing enterprise suites, NeatSuite Standard offers a unique combination of centralized management from a single console, support for Windows® and Linux® operating systems, unified graphical installation, and Web threat protection that is unmatched in the industry.

KEY FEATURES

Highly Automated Central Management and Deployment

- Simplifies administration and deployment with Web-based central management console and graphical installation interface
- Provides enterprise-wide visibility, monitoring, configuration, and reporting
- Automatically cleans clients of malware, spyware and bots, including hidden processes and registry entries

New! Industry Leading, In-the-Cloud Web Reputation

- Protects against Web-borne malware, data theft, lost productivity, and reputation damage
- Blocks access to malicious Web sites based on reputation ratings
- Leverages Trend Micro's unique in-the-cloud Web reputation database with millions of dynamically rated sites
- Provides real-time protection based on malware spam, and spyware activity

Secure Content Management Integrated at Multiple Layers

- Delivers multi-threat, multi-layered protection at Internet gateway, Microsoft® Exchange® and Lotus® Domino® mail server, network server, and client
- Improves productivity by dramatically reducing spam volume (#1 at catching spam*) with anti-spam protection in-the-cloud and at the gateway
- Reduces risk of liability by supporting regulatory compliance and blocking inappropriate content with advanced email and URL filtering
- Improves protection against spyware and grayware with a powerful new technologies
- Detects and removes active and hidden rootkits with new, innovative technology
